

## Media release

### Friday, November 18, 2022:

Earlier today, Central Depository Services (India) Limited (CDSL) detected malware in few of its internal machines.

As a matter of abundant caution, the Company immediately isolated the machines and disconnected itself from other constituents of the capital market.

As per initial findings, there is no reason to believe that any confidential information or the investor data has been compromised.

The CDSL team has reported the incident to the relevant authorities and is working with its cyber security advisors to analyse the impact.

Resolution of the incident is in process, subsequent to which settlement activities would be completed.
