How to setup and use Token with CDSL New DigitalSigner component

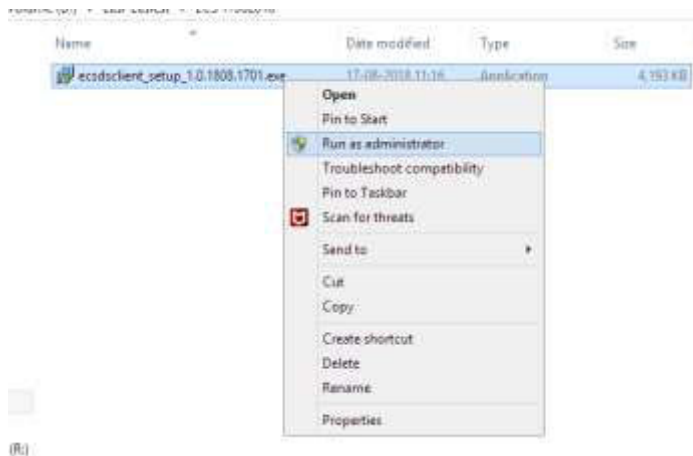

1. Download New DigitalSigner Component from CDSL web site and install it on local machine
2. Verify Token using the link for verifying eToken with New DigitalSigner component
3. In case of any issues during verifying eToken, please check Configuration settings for New DigitalSigner Component on local machine before using first time.

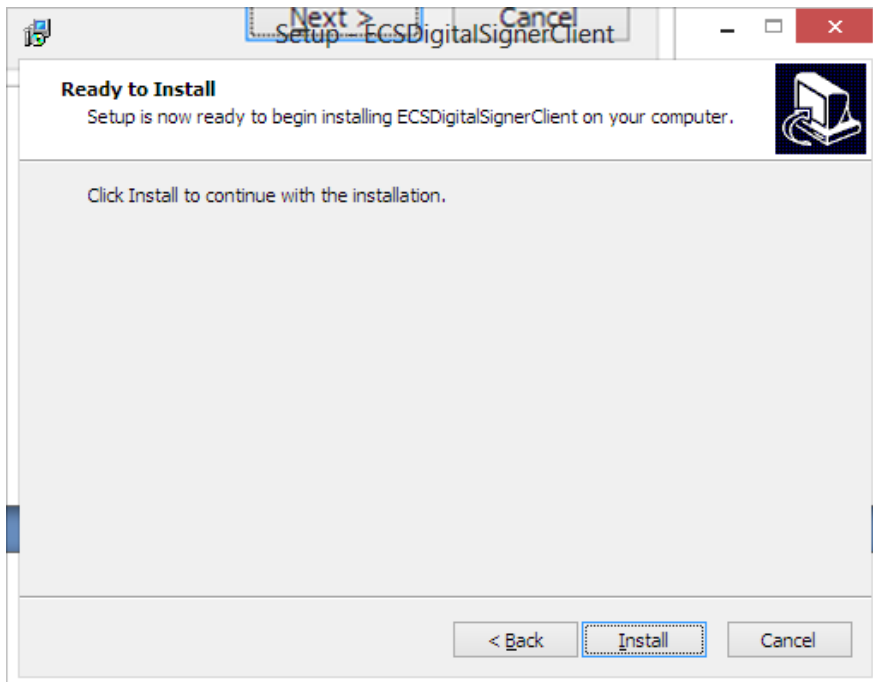

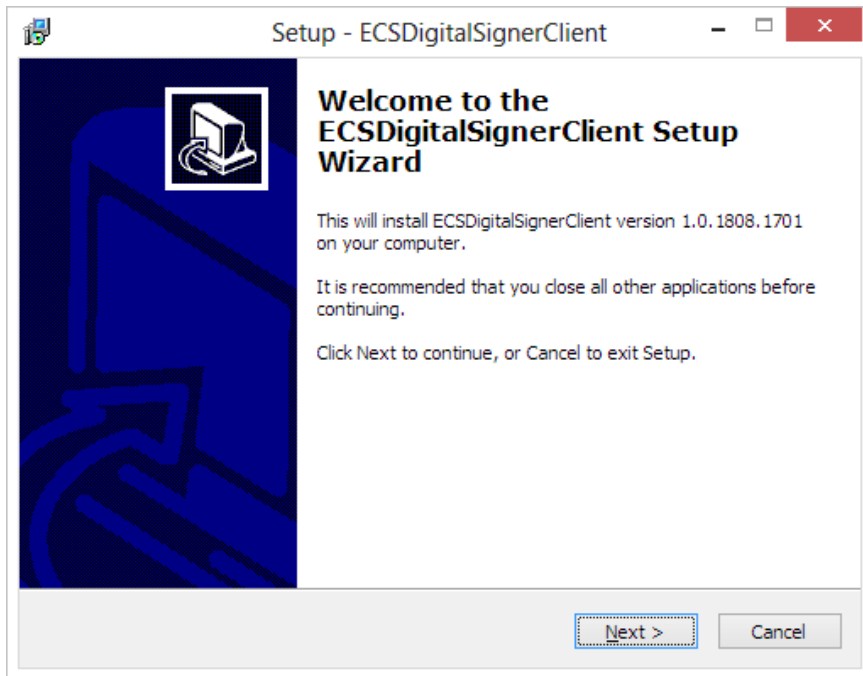

Step 1> To Download and Install New DigitalSigner Component from CDSL web site

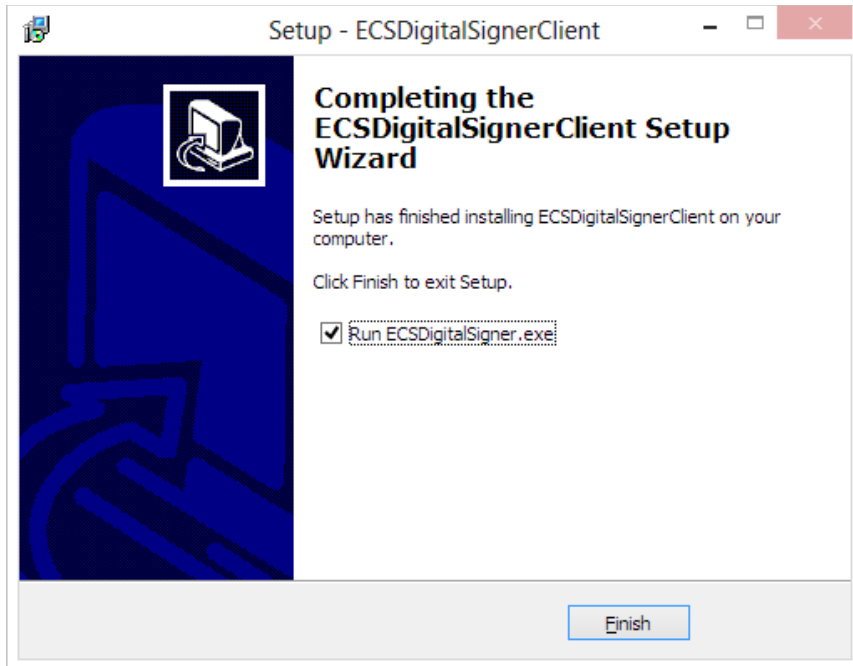

1. Go to CDSL India website, help page - <https://www.cdslindia.com/help.html>
2. As shown in below screenshot, in section Help on Digital Signature Certificate (DSC), click on link **New Digital Signer Setup** to download exe file in zip format and save it on local desktop and unzip.

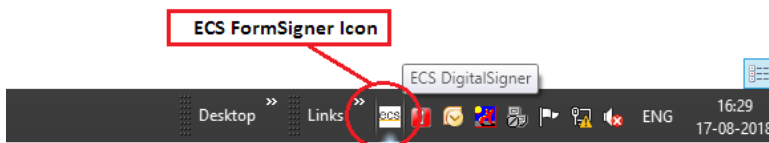

3. Right Click the exe and select run as administrator (local machine user requires administrator rights) to install the New DigitalSigner Component.

4. Once installation is completed click on Finish (keep the Run ECSDigitalSigner.exe box checked as shown). After successful installation, ECS DigitalSigner Icon will appear on bottom right of desktop icon tray.

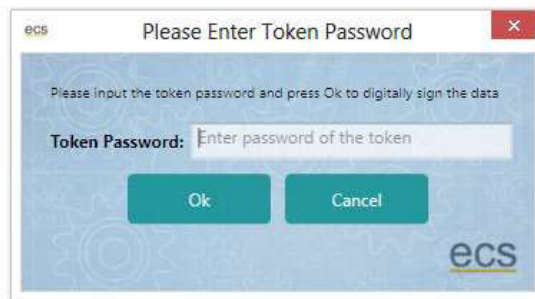

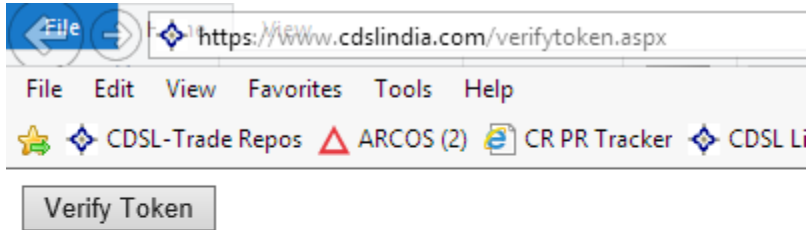

Step 2> Verify Token using the link for verifying eToken with New DigitalSigner component

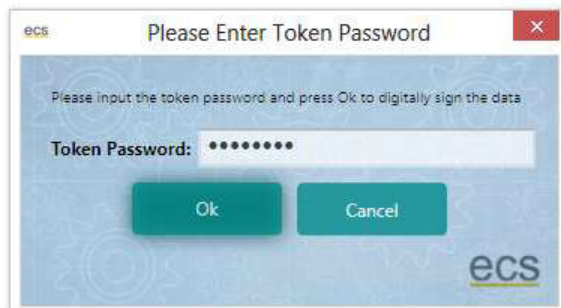

1. Click on following URL to verify token <https://www.cdslindia.com/verifytoken.aspx>
Same is also available on CDSL India website on help page -
<https://www.cdslindia.com/help.html>

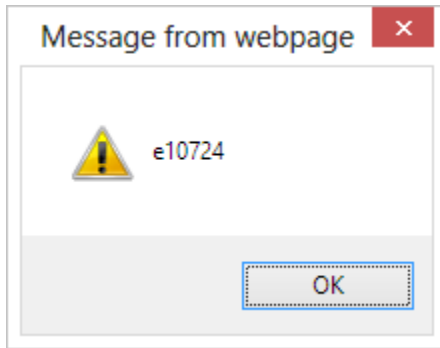

- As shown in below screenshot, click on button “Verify Token”. A pop up will be displayed to enter password.

- Enter password and click ok.

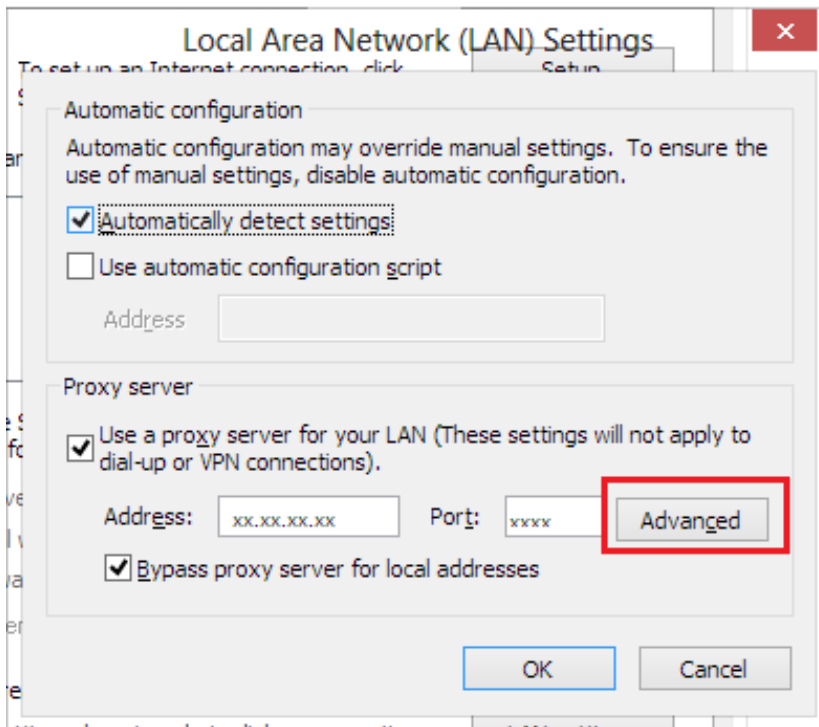

4. System will display the Token serial number.

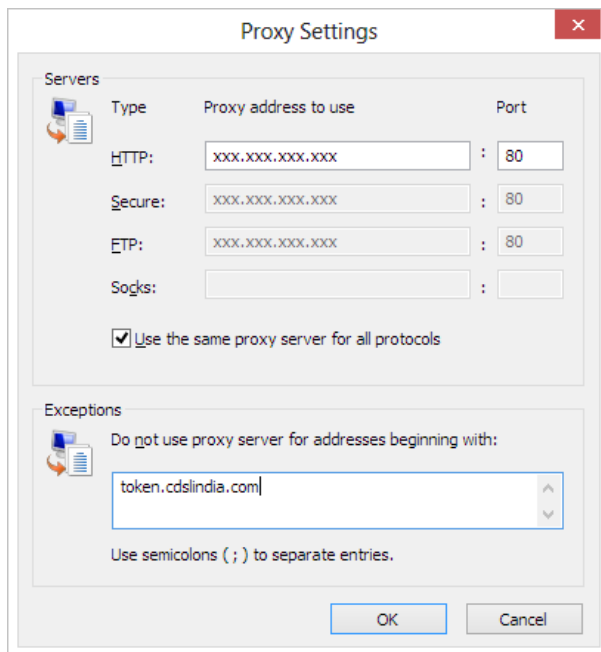

5. Kindly verify the serial number is correct. Now you are ready to use the e-Token with new Digital Signer in CDSL easiest.

Configuration settings for New DigitalSigner Component on local machine in case of any issues

- In case of any issues, check the proxy settings for browser set by your organisation.

- Use bypass proxy and add url **token.cdslindia.com** to the url list in advanced tab as shown in below screenshot

- Add following entry to the hosts file

127.0.0.1 token.cdslindia.com

hosts file is usually located in the path - C:\Windows\System32\Drivers\etc

To check if entry is correctly point to local host, go to cmd prompt and enter below command –

Ping token.cdslindia.com

It should return destination IP as 127.0.0.1
